April 2, 1945.

250 MILLION POUNDS
OF USED KITCHEN FATS IN '45!

To help meet MINIMUM requirements on products made from inedible tallow and grease, we must salvage 250 million pounds of used kitchen fats.

These salvage fats are needed to meet expanding military and industrial requirements for munitions, medicines, military soaps and other things, including -

Coatings that protect ships, tanks, fabrics, and other implements of war.

Synthetic Rubber manufacture and processing.

Hydrolic Fluids - for those big bulldozer lifting mechanisms and others.

Printer Ink - for the Nation's presses.

These salvage fats, even 250 million pounds of them, only help to make up the deficit in our available supplies of inedible fats. Even that quantity is not enough to do the whole job.

IN SUMMARY: The Nation is tapping every available source for its needed fats and oils. Domestic sources provide 90 percent of the 12 billion pounds of all types of fats used and exported in 1944. In 1945, we are unable to look forward to importing any additional substantial supplies to aid this situation, so -

LET'S MAKE FAT SALVAGE A HABIT!
